Who is this for?

You have heard that you should be using Xdebug.

You got Xdebug running, looked at the first breakpoint and said, “Nope!”

Beginning the trek into Xdebug.

Love php, or stare at it on a semi regular basis.

Just want to see Xdebug in action.

Not for

[@Tim M](#)

Use Xdebug everyday.

Been doing this for a long while.

Don't want to touch code.

Don't want to look at code.

Setup

A couple of tutorials for various IDEs

@Kit

- 1) PHPSTORM:
<https://www.jetbrains.com/help/phpstorm/zero-configuration-debugging.html>
- 2) Sublime Text 3:
<https://www.sitepoint.com/debugging-xdebug-sublime-text-3>
- 3) Atom:
<https://atom.io/packages/php-debug>

Couple of Notes on Xdebug:

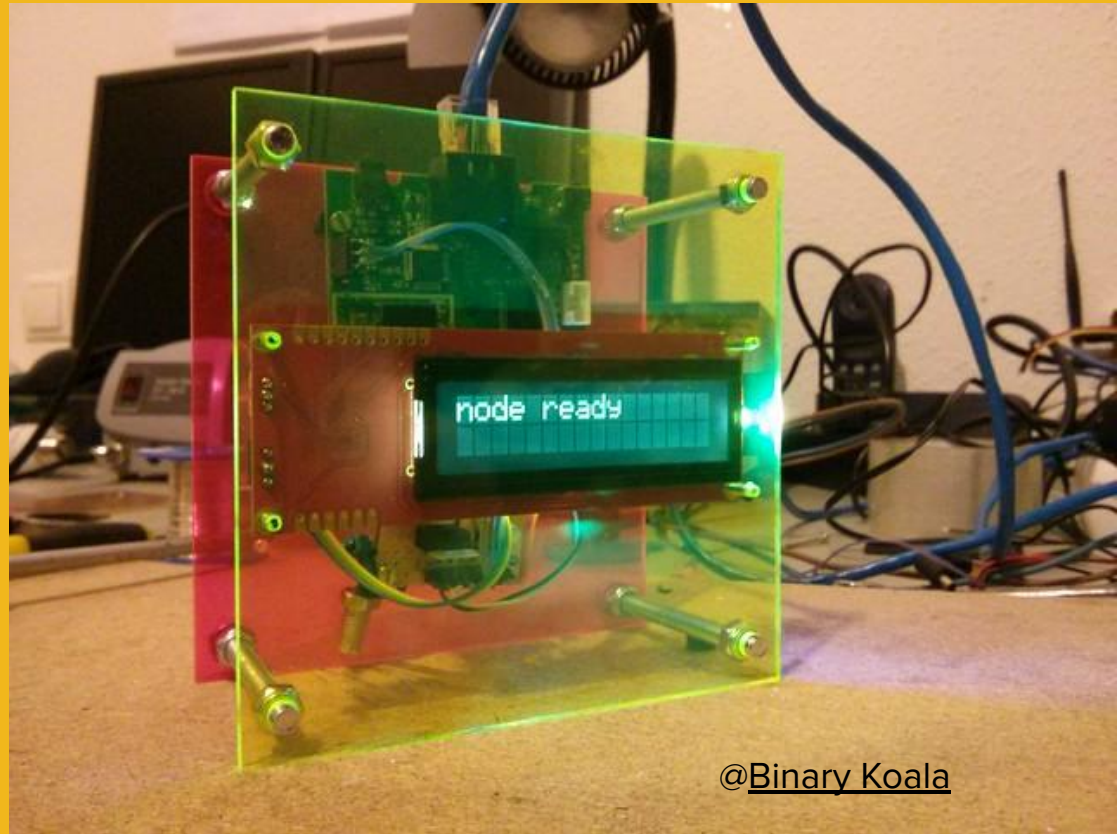

Performance Hit Remote Debugging CLI / Drush Debug
